Driven Information Technology student specializing in back-end web development and Java application development. Experienced in building secure, scalable, and database-driven systems with strong attention to performance optimization and clean architecture. Passionate about developing real-world solutions that improve efficiency and user experience.

AREA OF EXPERTISE

- Java Application Development
- Git & Version Control
- System Optimization & Debugging
- RESTful API Development
- Back-End Web Development
- Database Design

KEY PROJECTS & ACHIEVEMENTS

Inventory Management System (JavaFX Desktop Application)

- Developed a desktop-based inventory management system using Java and JavaFX for the graphical user interface.
- Implemented SQLite database integration to manage product records, stock levels, and transaction data.
- Built a secure login authentication system for controlled user access.
- Designed real-time inventory tracking and automated report generation for efficient stock monitoring.
- Applied object-oriented programming principles to ensure a modular, maintainable, and scalable application architecture.

Java - Based Application Development

- Developed object-oriented Java applications emphasizing modular and maintainable code.
- Applied data structure optimization techniques to improve performance and memory efficiency.
- Implemented version control workflows using Git for collaborative development.

PROFESSIONAL EXPERIENCE

Back-End Developer (Academic & Freelance Projects) **Jan 2023 – Present**

- Developed server-side application logic and backend systems using Java and Node.js.
- Designed and managed database schemas using MySQL and SQLite for efficient data storage and retrieval.
- Built and integrated RESTful APIs to handle data processing and communication between system components.
- Implemented authentication and session management systems to ensure secure user access and data protection.

Java Developer **Jan 2021 – Present**

- Built scalable Java applications using object-oriented principles.
- Optimized application logic for performance and reduced processing overhead.
- Maintained structured project workflows using Git version control.

EDUCATION

Bachelor of Science in Information Technology **2023 – Present**

Batangas State University TNEU – JPLPC Malvar
Major in Service Management

Relevant Coursework:

- Software Engineering
- Database Systems
- Web Development

CERTIFICATIONS & TRAINING

- Computer Systems Servicing NC II
- Virtual AI Camp 2025
- Databiz Conference 2024
